

Project Initialization and Planning Phase

Date	03 July 2026
Team ID	
Project Name	Rising Waters – A Machine Learning Approach to Flood Prediction
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A resident living in a flood-prone area near a river basin	find out in advance whether my area is at risk of flooding this monsoon	the local weather report gives me no personalised flood risk information	there is no easy tool that turns rainfall and weather readings into a flood forecast	anxious and unprepared for possible flood damage
PS-2	A local disaster management official	issue timely flood warnings to vulnerable communities	manually analysing rainfall trends is slow and often inaccurate	there is no automated, data-driven system to quickly assess flood likelihood	overwhelmed, and worried that a delayed response could put lives at risk
