Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • "I never know when the next flood will hit my area." • "The weather forecast doesn't tell me if I need to evacuate." • "I wish I could check my flood risk before it's too late."	THINKS • "What if I got proper warning before heavy rain floods my home?" • "Is my area really at high risk this monsoon season?" • "I need a simple, reliable way to check flood probability."
PERSONA NAME <i>Flood-Prone Area Resident</i> <i>(End User)</i>	
DOES • Checks weather updates and rainfall news manually every day • Asks neighbours and local authorities about flood risk • Prepares an emergency kit only after heavy rain has already started	FEELS • Anxious throughout the monsoon season • Frustrated by the lack of clear, personalised flood alerts • Relieved and reassured when given enough advance warning to prepare
