

Project Demo Planning

Date	02 July 2026
Team ID	
Project Name	Rising Waters – A Machine Learning Approach to Flood Prediction
Maximum Marks	1 Mark

Project Demo Planning

A well-structured demo plan ensures the team presents Rising Waters effectively, covering all key aspects in a clear and organized manner within the allotted time.

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction & Problem Statement	Explain the flood-prediction problem and why early warning matters	2	Lakshmi Lathish Pasupuleti & Lokasree Ranga Priya Duddu
2	Dataset & EDA Walkthrough	Show the rainfall & flood datasets and key exploratory charts	3	Lakshmi Lathish Pasupuleti & Lokasree Ranga Priya Duddu
3	Model Comparison & Selection	Present the four-model accuracy comparison and explain why XGBoost was chosen	3	Lakshmi Lathish Pasupuleti & Lokasree Ranga Priya Duddu
4	Live Web App Demo	Walk through Home → Predict → Flood Chance / No Flood Chance for two contrasting inputs	5	Lakshmi Lathish Pasupuleti & Lokasree Ranga Priya Duddu
5	Deployment Overview	Show the Docker build and IBM Cloud deployment options	2	Lakshmi Lathish Pasupuleti & Lokasree Ranga Priya Duddu
6	Q&A	Answer evaluator questions	3	Lakshmi Lathish Pasupuleti & Lokasree Ranga Priya Duddu

Demo Flow Summary

Step	Activity	Notes
1	Introduction & Problem Statement	Set context before diving into technical details
2	Solution Overview	High-level architecture: notebook → model bundle → Flask app
3	Live Demonstration	Run a flood-risk and a no-flood-risk prediction back to back
4	Results & Impact	Highlight 95.65% test accuracy and the early-warning use case
5	Closing & Q&A	Recap and open the floor to questions
